

# The Chapel of North Canton

Project Location: North Canton, Ohio

Project Date: 1999

## Project Description:

A nominal 24,800 square foot addition to an existing church building. The addition includes a new entrance and foyer, a 700 seat sanctuary, multiple adult classroom spaces, a library, office space, a large meeting room, a set of large toilet rooms and a 5500 square foot youth ministry building.

Our scope of work was limited to the HVAC design which consisted of nineteen (19) packaged gas/electric rooftop units totaling 105 tons of cooling capacity. The Clerestory entrance and Cathedral ceiling in the sanctuary created design challenges to conceal the ductwork while maintaining both the desired aesthetics and the environmental comfort.
