

# Rockpointe Community Church

Project Location: Sterling Heights, Michigan

Project Date: 2002

## Project Description:

A nominal 15,000 square foot addition and 12,000 square foot renovation project for an existing church. The new areas include a video café, a commons area and ministry office space. The renovation area included classroom spaces as well as a sanctuary enlargement within the original building confines.

The plumbing system design included a new pair of large public toilet rooms, a café, an extension of the gas service, new roof drainage and a new fire and water service.

The HVAC system is comprised of multiple packaged gas/electric rooftop units. Much of the ductwork is exposed within an open ceiling bar joists plan. The sanctuary expansion also has an Energy Recovery Ventilator serving this area.
